

# Job Opportunity

**Title:** Electrical Technician

---

## **Job Summary:**

We need experienced, as well as, entry level Electrical Technicians who will utilize an assortment of documents to build custom manufactured commercial and industrial refrigeration products in a production environment. We are looking for individuals with high mechanical aptitude, who are comfortable using hand/power tools and willing to learn and take directions.

This is a hands-on position where candidates will receive training, guidance and direction from qualified personnel to perform the following essential duties and responsibilities:

- Coordinate all aspects of electrical layout per design documentation and wiring schematics on assigned projects
- Make decisions on the mounting of major components for the electrical system including rack controllers, transformers, auxiliary panels, variable frequency drives, etc.
- Wire pressure switches, solenoid valves, compressors and other auxiliary devices
- Perform electrical inspections to ensure systems are built per design specifications
- Interact professionally with all departments, vendors and customers
- Maintain a positive work environment by consistently achieving goals and reinforcing the team approach
